NEW QUESTION 274
Which of the following technologies extracts detailed information from packets and stores that information in state tables?

A. INSPECT Engine

B. Next-Generation Firewall
C. Packet Filtering
D. Application Layer Firewall

Answer: A

Explanation:
Check Point FireWall-1's Stateful Inspection overcomes the limitations of the previous two approaches by providing full application-layer awareness without breaking the client/server model. With Stateful Inspection, the packet is intercepted at the network layer, but then the INSPECT Engine takes over. It extracts state-related information required for the security decision from all application layers and maintains this information in dynamic state tables for evaluating subsequent connection attempts. This provides a solution which is highly secure and offers maximum performance, scalability, and extensibility.
