Which two statements are correct regarding the export and import of playbooks? (Choose two.)

- A. You can export only one playbook at a time.
- B. You can import a playbook even if there is another one with the same name in the destination.
- C. Playbooks can be exported and imported only within the same FortiAnalyzer.
- D. A playbook that was disabled when it was exported, will be disabled when it is imported.

**Answer:** BD

**NEW QUESTION 173**

If the primary FortiAnalyzer in an HA cluster fails, how is the new primary elected?

- A. The configured IP address is checked first.
- B. The active port number is checked first.
- C. The firmware version is checked first.
- D. The configured priority is checked first

**Answer:** D

**Explanation:**

In the case of a primary device failure, FortiAnalyzer HA uses the following rules to select a new primary:

- All cluster devices are assigned a priority from 80 to 120. The default priority is 100. If the primary device becomes unavailable, the device with the highest priority is selected as the new primary device. For example, a device with a priority of 110 is selected over a device with a priority of 100.
- If multiple devices have the same priority, the device whose primary IP address has the greatest value is selected as the new primary device. For example, 123.45.67.124 is selected over 123.45.67.123.
- If a new device with a higher priority or a greater value IP address joins the cluster, the new device does not replace (or pre-empt) the current primary device automatically.
