NEW QUESTION 4

- (Topic 5)

You have a Microsoft 365 E3 subscription that contains 500 users. All the users have computers that run Windows 10 and are joined to Azure AD.

You need to generate a report that identifies which documents the users copied from Microsoft Teams to USB devices.

What should you do first?

B. Assign the Microsoft 365 ES compliance add-on to each user.

C. Create a custom data loss prevention (DLP) policy.

D. Assign the Enterprise Mobility + Security ES add-on to each user.

Answer: B

Explanation:

According to the Microsoft documentation¹, to generate a report that identifies which documents the users copied from Teams to USB devices, you need to use advanced hunting on Microsoft Defender ATP. Advanced hunting lets you run queries to find threat activity involving USB devices, such as mounting and unmounting of USB drives or copying of files².

To use advanced hunting, you need to have one of the following roles:

? Security administrator

? Security reader

? Security operator

? Global administrator

The Groups Administrator role does not have access to advanced hunting or Microsoft Defender ATP.

Therefore, based on this information, the correct answer is B. Assign the Microsoft 365 E5 compliance add-on to each user. This add-on includes Microsoft Defender ATP and allows you to use advanced hunting features³. Alternatively, you can request one of the roles that have access to advanced hunting, such as Security administrator or Global administrator.

The company opens a new office in Toronto that has 500 users.

You need to ensure that the correct address is available to emergency responders. What should you do?

- A. Create a calling policy and assign the policy to each user.

- C. Add an emergency address, and then modify the outbound calling setting for each user.
- D. Add an emergency address, and then modify the location for each phone number.

Answer: D

Explanation:

According to the Microsoft documentation¹, you need to add an emergency address for each location where your users make and receive phone calls. An emergency address is a civic address—the physical or street address of a place of business for your organization. It is used to route emergency calls to the appropriate dispatch authorities and to assist in locating the emergency caller.

After you add an emergency address, you need to assign a phone number to it. You can assign either a user number or a service number. A user number is assigned to a specific user in your organization who makes and receives phone calls. A service number is used for services such as Audio Conferencing (for dial-in numbers), auto attendants, or call queues.

To assign a phone number to an emergency address, you need to modify the location for each phone number. You can do this by using the Microsoft Teams admin center or PowerShell. For example, to modify the location for a user number by using PowerShell, you can use the Set-CsOnlineVoiceUser cmdlet with the -LocationID parameter².
