AI Transformation Leader (beta)

<https://www.certleader.com/AB-731-dumps.html>

NEW QUESTION 1

What is considered a best practice when forming an AI adoption team in an enterprise environment?

- A. Include representatives from legal, leadership, and business units to align AI initiatives with organizational priorities.
- B. Include primarily IT and project management staff initially to streamline deployment, adding governance and compliance roles later.
- C. Include only data scientists and engineers at first to validate technical feasibility, then add other stakeholders later.
- D. Include procurement and vendor management specialists early to evaluate AI tools, involving business teams once a platform is selected.

Answer: A

Explanation:

Enterprise AI adoption succeeds when it is cross-functional from the start. Option A is best practice because AI impacts legal risk, privacy, security, compliance, workforce processes, and business strategy—not just technology. Including leadership ensures alignment to priorities and funding; including business units ensures use cases and success metrics are real; including legal/compliance ensures responsible AI and regulatory obligations are addressed early. This prevents rework and reduces the chance of deploying solutions that are misaligned with policy or unacceptable risk. Options B and C delay governance and business alignment, which often leads to “build first, govern later” failure modes—solutions that work technically but cannot be approved or scaled due to privacy/security gaps or unclear accountability. Option D over-optimizes for vendor selection without ensuring the organization has defined responsible AI requirements, target use cases, and operating model. Procurement is important, but it is not the primary driver of a successful adoption team. The most sustainable approach is a representative adoption team that integrates business, technical, and governance stakeholders from day one.

NEW QUESTION 2

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft 365 Copilot enables users to search across emails, files, chats, meetings, and connected apps, by using natural language queries.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot provides data protection, and helps ensure that user prompts and chat data are secure.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot is included in all Microsoft 365 subscriptions.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft 365 Copilot enables users to search across emails, files, chats, meetings, and connected apps, by using natural language queries.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot provides data protection, and helps ensure that user prompts and chat data are secure.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot is included in all Microsoft 365 subscriptions.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 3

You have a historical dataset that contains 1,000 records. You need an AI solution that can analyze the data to identify patterns and predict future outcomes. What should you include in the solution?

- A. Microsoft Foundry
- B. Azure Document Intelligence in Foundry Tools
- C. Azure Machine Learning
- D. Azure Content Understanding in Foundry Tools

Answer: C

NEW QUESTION 4

Your company is preparing to adopt Microsoft 365 Copilot and wants to follow Microsoft responsible AI principles. As a business leader, you propose establishing an AI governance council to ensure alignment with the responsible AI principles. What is the primary purpose of the council? More than one answer choice may achieve the goal. Select the BEST answer.

- A. to monitor user behavior and enforce compliance with internal IT policies
- B. to train employees on how to use Copilot features effectively
- C. to oversee implementation, manage technical performance, and ensure successful AI deployment

D. to guide strategy, provide oversight, and ensure cross-functional alignment for responsible AI adoption

Answer: D

Explanation:

An AI governance council (often called an "AI Council") exists primarily to set direction and provide cross-functional oversight so AI adoption stays aligned to the organization's values, risk posture, and Responsible AI commitments. That maps most directly to D. Microsoft's guidance on creating an AI Council describes leadership responsibilities such as defining and communicating the organization's AI vision, values, and policies, reviewing and approving AI use cases/projects, and coordinating with enablement and technical readiness teams to understand risks, issues, and opportunities. It also emphasizes representation across distinct functions (for example: senior leadership, legal, compliance, risk, ethics, data, technology, business, HR) to ensure governance decisions reflect a broad, accountable perspective.

The other options describe activities that may be supporting outcomes of governance, but they are not the council's primary purpose. A is narrow (IT policy enforcement/user monitoring) and is typically handled by security/compliance operations rather than the top-level governance body. B is user enablement/training (commonly owned by adoption/change management teams). C focuses on technical delivery and performance management (often owned by engineering/MLOps/service owners). The governance council's central value is strategic guidance + oversight + cross-functional alignment to ensure Responsible AI adoption is consistent, accountable, and sustainable across the business.

NEW QUESTION 5

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Azure Vision in Foundry Tools can extract and analyze key phrases from PDF files.	<input type="radio"/>	<input type="radio"/>
Azure Vision in Foundry Tools can generate images based on natural language descriptions.	<input type="radio"/>	<input type="radio"/>
Azure Document Intelligence in Foundry Tools can be used to automate the processing of invoices and credit notes.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Azure Vision in Foundry Tools can extract and analyze key phrases from PDF files. Answer: No

Azure Vision in Foundry Tools can generate images based on natural language descriptions. Answer: No

Azure Document Intelligence in Foundry Tools can be used to automate the processing of invoices and credit notes. Answer: Yes

No— Azure Vision in Foundry Tools focuses on computer vision tasks such as image analysis and OCR (reading text from images and documents). While it can extract text from scanned PDFs via OCR, key phrase extraction is a natural language processing capability provided by Azure Language in Foundry Tools, not Azure Vision. Key phrase extraction analyzes text to identify main concepts, which is a different service family than vision.

No— Azure Vision can analyze existing images (for example, generate captions/descriptions of an image), but generating new images from a text prompt is a generative model capability (for example, DALL-E through Azure OpenAI/Azure AI Foundry model endpoints), not an Azure Vision feature. Vision describes what it "sees"; it doesn't synthesize new images from natural language.

Yes— Azure Document Intelligence in Foundry Tools is designed for intelligent document processing, including automating extraction of structured fields from financial documents. Microsoft provides prebuilt models for invoices and supports custom extraction for similar document types, which makes it suitable for automating workflows involving invoices and credit-note style documents (field extraction, validation, routing).

NEW QUESTION 6

You have a business unit that uses an AI solution to process loan applications. You discover that the solution rejects the application of all applicants that are older than 60 years of age. Which Microsoft responsible AI principle is this violating?

- A. accountability
- B. transparency
- C. fairness
- D. reliability and safety

Answer: C

NEW QUESTION 7

HOTSPOT

Select the answer that correctly completes the sentence. Prompt engineering is the process of _____.

Answer Area

Prompt engineering is the process of

integrating AI-powered tools into business workflows.

identifying and fixing errors in AI-generated content.

designing, developing, and training generative AI models to produce contextually relevant content.

crafting clear instructions to guide generative AI solutions in generating context-appropriate content.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

crafting clear instructions to guide generative AI solutions in generating context-appropriate content. Prompt engineering is fundamentally about how you communicate intent to a generative AI model so it produces outputs that meet business expectations. The best completion is ??crafting clear instructions to guide generative AI solutions in generating context-appropriate content?? because it captures the practical, day-to-day discipline: shaping the input (prompt) with the right task framing, constraints, context, and output format. In real deployments, prompt engineering includes specifying the role and objective (for example, ??act as a customer support agent??), providing the necessary context (product details, policy excerpts, audience), adding explicit requirements (tone, length, must/must-not statements), and defining structured output (JSON fields, bullet sections, headings). It can also include adding examples (few-shot prompting), clarifying what to do when information is missing, and instructing the model to cite only provided sources or to ask follow-up questions. These techniques reduce ambiguity, improve consistency, and lower the risk of hallucinations or off-brand responses. The other options are not accurate definitions. ??Integrating AI-powered tools into business workflows?? describes solution adoption/integration, not prompt engineering. ??Identifying and fixing errors in AI-generated content?? is review/editing or quality assurance. ??Designing, developing, and training generative AI models?? is model development/ML engineering. Prompt engineering operates without changing model weights; it??s about steering model behavior through well-constructed instructions and context.

NEW QUESTION 8

Your company plans to use generative AI to help build a website that will showcase various existing products. Which capability best describes a benefit of using generative AI for this project? Select the BEST answer.

- A. translating product descriptions into a different language
- B. analyzing product sales to identify patterns and trends
- C. designing a new product based on customer requirements
- D. creating product descriptions based on product specifications

Answer: D

NEW QUESTION 9

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Retrieval Augmented Generation (RAG) architectures require that a large language model (LLM) be retrained on proprietary data.	<input type="radio"/>	<input type="radio"/>
Retrieval-Augmented Generation (RAG) grounds a language model to produce more factual and context-relevant responses.	<input type="radio"/>	<input type="radio"/>
Retrieval Augmented Generation (RAG) retrieves information from external knowledge sources at runtime instead of relying solely on the knowledge of a generative AI model.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Retrieval Augmented Generation (RAG) architectures require that a large language model (LLM) be retrained on proprietary data.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 10

Your company is developing an AI-powered customer support agent. You need to ensure that the solution follows Microsoft responsible AI principles. Which two actions should you perform? Select the two BEST answers. Each correct answer presents part of the solution.

- A. Retain all customer conversations.
- B. Test the agent to ensure that responses are inclusive and culturally sensitive.
- C. Enable the agent to operate independently.
- D. Ensure that the agent can be used for multiple purposes.
- E. Provide a clear disclaimer that users are interacting with an AI solution.

Answer: BE

NEW QUESTION 10

Your company discovers that several employees use personal ChatGPT accounts to assist with work tasks. You are concerned about proprietary data being shared externally. You need to evaluate the business value of rolling out Microsoft 365 Copilot. Which capability is a key benefit of using Copilot instead of a personal ChatGPT account?

- A. analyzing and producing reports based on complex data
- B. generating ideas and solving issues
- C. drafting documents, emails, presentations, and marketing materials
- D. accessing internal data in accordance with existing Microsoft 365 policies

Answer: D

NEW QUESTION 15

Your company is evaluating the use of Microsoft Copilot Studio to support business process automation and employee self-service. Which two capabilities are directly supported in Copilot Studio? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. Using agents to identify and respond to security incidents
- B. configuring document security
- C. drafting and summarizing files in Microsoft Word and PowerPoint
- D. building agents that connect to business data and automate user interactions
- E. customizing agent behavior and responses

Answer: DE

NEW QUESTION 19

Your company has a Microsoft 365 subscription and uses Microsoft 365 Copilot Chat. Some users need to build and use declarative agents that can access work data. Which type of license should you recommend for the users?

- A. a Microsoft 365 Copilot add-on license
- B. Microsoft Copilot Studio user license
- C. a Copilot Chat pay-as-you-go plan

Answer: A

NEW QUESTION 22

Your company purchases Microsoft 365 Copilot for its sales department. The sales department needs to find and summarize information across internal documents quickly. From which two data sources can the sales department obtain results by default? (Select TWO.)

- A. an on-premises file share
- B. a custom customer relationship management (CRM) system
- C. Microsoft SharePoint
- D. Microsoft OneDrive
- E. Microsoft Sway

Answer: CD

Explanation:

By default, Microsoft 365 Copilot is grounded in your organization's Microsoft 365 data through Microsoft Graph, and it respects the user's existing permissions. For find and summarize information across internal documents, the most direct default document repositories in Microsoft 365 are SharePoint (team sites and shared libraries) and OneDrive (a user's work files). That is why C (Microsoft SharePoint) and D (Microsoft OneDrive) are the correct selections. Microsoft explicitly describes Copilot as accessing organizational content via Microsoft Graph, including user documents and related work content.

The other options are not by default sources. A (on-premises file share) is not automatically part of Microsoft Graph unless you integrate/migrate content or use connectors to make it discoverable in Microsoft 365 experiences. B (custom CRM) similarly requires an integration approach (for example, Microsoft 365 Copilot connectors / Graph connectors) to index and expose that data for Copilot to use. E (Microsoft Sway) is not a primary default content source for Copilot's document grounding and is not typically referenced as a core internal document repository compared to SharePoint/OneDrive.

So, for immediate, out-of-the-box internal document discovery and summarization within Microsoft 365, SharePoint + OneDrive are the default answer.

NEW QUESTION 23

Your company has an AI solution that uses a prebuilt Azure OpenAI model to generate content. You need to reduce the cost of the solution while minimizing the impact on the quality of the generated output. Which two actions should you perform? (Select TWO.) NOTE: Each correct selection is worth one point.

- A. Fine-tune the existing model.
- B. Apply content moderation.
- C. Optimize the prompts.
- D. Switch to an alternate model.
- E. Decrease the number of hosting hours for the model.

Answer: CD

NEW QUESTION 27

.....

Thank You for Trying Our Product

* 100% Pass or Money Back

All our products come with a 90-day Money Back Guarantee.

* One year free update

You can enjoy free update one year. 24x7 online support.

* Trusted by Millions

We currently serve more than 30,000,000 customers.

* Shop Securely

All transactions are protected by VeriSign!
